

Ivycandy Hair CRM: Handover Guide

A step-by-step guide for the owner and the team. No technical knowledge needed. (Support staff: see `TECHNICIAN.md`.)

1. What this CRM is

Think of a **lemonade stand**. You **buy** lemons (money goes out) and **sell** cups (money comes in). You only know if you are winning when you see both.

Ivycandy Hair buys hair from suppliers in Asia and sells it to customers, who mostly pay in instalments. The CRM is an organised notebook that never forgets and does the maths:

In the business	Where it lives in the CRM
A person who buys or asks	Contacts
A shop or company	Companies
A sale, with the hair ordered	Deals (with line items)
Money a customer has paid	Payments (on a deal)
An order placed with a supplier	Invoices
Hair you have vs hair you sold	Stock
Things to do (call, ship, chase)	Tasks and Activities
The scoreboard	Dashboard

2. Signing in and who sees what

- **Admin** sees everything. **Sales** and **Support** see only records they own.
- Sample logins (from the seed): `admin@crm.test`, `sales@crm.test`, `support@crm.test`. The password is `SEED_USER_PASSWORD` in the `.env` file.
- New sign-ups become **Sales**. An admin can promote them (see `TECHNICIAN.md`).

Example: Sam (Sales) creates a deal. Sam sees it and Admin sees it. Support does not.

3. Each process, with an example

Running example: **Adaeze Okafor**, Eisenbahnstr. 7, 79576 Weil am Rhein, Germany, phone +4915906462275. She bought Bounce Curl 12" and Pixie Curl 16", total \$300.

3.1 Add a customer (Contacts)

1. Go to **Contacts**, then **New contact**.
2. Fill in name, phone and email. Set type to **Customer**.
3. Fill in the **address** fields (street, city, state, postal code, country).

4. Save.

Example: Adaeze is saved with her German address. It shows on her contact page.

3.2 Register a sale (Deals)

1. Go to **Deals**, then **New deal**. Pick the contact.
2. Under **Items**, add one line per product: product, colour, length, quantity, price. The deal amount is the total of the lines.
3. Choose the **currency**. Set the **stage**: Qualification, Discovery, Proposal, Negotiation, Closed Won or Closed Lost.
4. Save. You can drag cards between stages on the board.

Example: Deal "Adaeze Okafor order". Line 1: Bounce Curl, 12". Line 2: Pixie Curl, 16". Total \$300.

3.3 Record payments and instalments

1. On the deal card, open the menu and choose **Payments**.
2. **Add payment**: amount, date, method (Bank transfer, Cash, Digital, Other).
3. Optional: **Set schedule** to split the price into instalments with due dates.
4. The card shows **paid**, **balance** and **overdue**.

Rules to know:

- Payments are applied to instalments **oldest first**.
- An instalment is **overdue** if it is not covered and its due date has passed. Due *today* is not overdue.
- You cannot pay more than the deal total. The deal total cannot drop below what is already paid.

Example: Total \$300, three instalments of \$100. Adaeze pays \$100 now. Paid \$100, balance \$200, next due next month.

3.4 Add a supplier invoice (Invoices)

Three ways:

- **By hand: Invoices, New**. Fill in number, supplier, billed-to, and the lines.
- **Import: Import** and choose a CSV or Excel file. Lines are read and a form opens prefilled. You must still fill in the invoice number, supplier and billed-to, then click create. An error banner appears if one is missing.
- **Print**: open an invoice and click **Print**.

Example: PI-20250807-001 from Yuzhou City Xiao Yuan is the sample (36 lines, 59 pieces, deal price \$7,309). The printed subtotal says 7,945 but the lines add to 7,941, so check supplier sheets against the lines.

3.5 Stock on hand (Stock)

The **Stock** page compares what you bought (invoices) with what you sold (deals in Proposal, Negotiation or Closed Won). Lines are matched on **product + colour + length**, ignoring capital letters.

Example: Adaeze's deal has no colour or length that matches an invoice line, so it appears under **unmatched**. To fix, enter colour and length on the deal items exactly as on the invoice.

3.6 Tasks, activities and reminders

- **Tasks:** things to do with a due date and priority. A daily email reminds the owner.
- **Activities:** a log of notes, calls, emails and meetings on a contact or deal.
- **Instalment reminders:** a daily email goes out for instalments that are due.

Example: Task "Call Adaeze about 2nd instalment", due Friday, priority High.

3.7 Read the Dashboard

- **Stock spend:** what you paid suppliers.
- **Cash flow: collected** (paid so far), **owed** (balance customers still owe) and **overdue**, plus estimated profit.
- Money is shown **per currency**. USD and EUR are never added together.
- Deals count only when they are in a counted stage, which is why a new invoice alone does not change sales figures.

Example: Collected \$100, owed \$5,000 across 2 deals, overdue \$0.

4. Sample data versus real data

- The seed gave sample contacts, companies, deals, tasks and one sample invoice. They stay as **training material**.
- Your real records: Adaeze Okafor's order, and invoices `-002` (Crown Hair, \$5,166) and `-003` (Lilly Wigs, \$245).
- **Never run `npm run db:seed` on a database holding real work.** It wipes everything and reloads the samples.
- To clear samples later, ask Claude or the technician to delete only the seed-owned rows and keep your real ones. Tip: put "Sample" in the name of practice records.

5. Known quirks and open items

- Sample invoice lines add to 7,941 but the printed subtotal is 7,945.
- A \$200 payment on "Luxe Lace – Sample Order" was probably deleted during testing. Re-enter it if it was real.
- Stock matching is strict, so spelling and colour must agree.

6. Before going live (checklist)

1. Change or delete the three seeded accounts and passwords.
2. Set `CRON_SECRET` (without it the daily reminders are not protected).
3. Set an email provider (`RESEND_API_KEY`, or `EMAIL_SERVER` and `EMAIL_FROM`). Without one, no real emails are sent.

4. Create the production database, set `DATABASE_URL`, `DIRECT_URL`, `NEXTAUTH_URL`, `NEXTAUTH_SECRET`.
5. Deploy, sign in, create your own admin, and do one test deal and payment.
6. Decide when to clear the sample data.
